EnRoute - System Manual

1.1 Minimum Requirements:

OS: Android Lollipop or higher

A device with stable connection

1.2 How to install:

Click on the apk file on your android device and follow the instructions on screen

1.3 Troubleshooting:

Failed Account Creation:
- It is possible you have already made an account with your email address, try logging in.
- If you are a driver, then you might have typed in the wrong Business ID

Orders Not Disappearing
- This bug should be fixed, but if this happens click on accept order a second time and exit out of the route. The order should disappear right after.

Switched Businesses
- Unfortunately EnRoute does not support the switching of Business IDs on driver accounts. To solve this problem please create another account with a different email address.
